

SafeNet Authentication Client Quick Start Guide

Getting Started

You will have been provided a copy of this QuickStart User guide along with your iKey 2032/4000 token when you applied for a DocumentSign Digital ID. This section of the QuickStart guide is applicable to both the PersonalSign and DepartmentSign products that utilize a USB token for Acrobat desktop digital signatures.

Stage 1 - Installation – SafeNet Utilities and iKey Drivers

Please download and run the utility installation files from the GlobalSign website.

<http://www.globalsign.com/support/adobe/SafeNetAuthenticationClient-x32.msi>
<http://www.globalsign.com/support/adobe/SafeNetAuthenticationClient-x64.msi>

Please do not select the BSec install option!

When prompted to do so, insert your iKey token into a free USB slot on your PC. Your operating system will then find the relevant drivers for the iKey token and install them. Once installed you will see the iKey token icon appear in your task tray with the Status of the Token (Inserted) appearing as shown below.

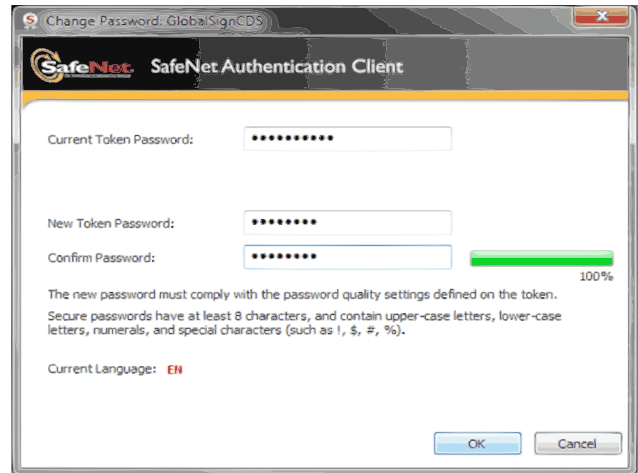

Stage 2 – Initialise your token and change your iKey Passphrase

The token is sent to you in a blank format and first needs to be initialised (As shown in the screenshot below).

We then recommend that you modify the passphrase which is initially set to Password#1. Click "change token password" on your iKey token homepage. The Passphrase will be used to authenticate you as the user of the iKey token each time you sign a document, so please ensure you select a strong Passphrase and that you do not forget it.

Ten Incorrect entries of the Passphrase will deactivate your token and any certificates which will require you to go through the certificate install process again.

What Software & Hardware do I need?

Certified Document Services (CDS) is one of the services enabled by the Adobe Root Certificate Authority. CDS enables document authors to sign Portable Document Format (PDF) files, using standard digital certificates, which automatically validate when authors are using free Adobe® Reader® software. No additional client software or configuration is required. In order to create a PDF to be signed you will need either a product from the Adobe Acrobat family (Standard, Professional or 3D) or from the Adobe LiveCycle Enterprise Suite.
