

Subject Alternative Names (SANs)

Multi-Domain Unified Communications SSL Certificates

Standard SSL Certificates secure only one Fully Qualified Domain Name. SANs is an optional feature available for most GlobalSign SSL certificates that facilitates the inclusion of multiple domain names on a single certificate. This new SSL Certificate option provides increased flexibility and allows the customer to build a SSL Certificate that is simple to install, use and manage. It is more secure than a Wildcard SSL, built for exact server security requirements to suit almost any environment and will lower the overall cost of deploying SSL. SAN's can be selected as an option with all GlobalSign SSL Certificates, including Domain Validated (DV), Organization Validated (OV) and Extended Validated (EV). It is available to all retail and enterprise customers as well as Channel partners with both MSSL and partner accounts and is now available through Cloud SSL.

How can a SANs SSL Certificate be used?

As the most flexible SSL offering now available, GlobalSign's SANs SSL Certificates can enable organizations with restricted IP address availability secure multiple sites, applications or functions. SANs SSL Certificates can include any combination of domain names, subdomains, IP addresses and localhost names with a maximum of 40 in total.

Included within the Certificate is also the ability to secure the communications functions of Exchange and Communications Server (Unified Communications) that hinge around the use of a single IP address. As this multi-domain SSL Certificate requires only one IP address, it can protect all confidential communications over HTTPS, SMTP, POP/IMAP and other protocols offered through UC.

SANs Benefits

- Secure all your communications with a single SSL Certificate – easier installation and management
- Gets around technical and security limitations of Wildcard SSL
- Requires only one IP Address
- All the benefits of GlobalSign SSL including universal browser and device support, Unlimited Server Licenses, Free SGC Security and AutoCSR
- Now available for Cloud SSL - www.globalsign.com/cloud/
- Dynamic certificate configuration for complex network setups

SANs Features

Unified Communications (UC)

Support secure applications for new technologies such as Microsoft Exchange and Microsoft Office Communications Server. UC support is added free of charge, making GlobalSign the lowest cost provider of UC compatible SSL Certificates.

Up to 40 Fully Qualified Domain Names (FQDNs)

If the company has different domains, such as abc.com, xyz.com, 123.com, or different top level domains such as domain.com, domain.net, domain.co.uk, domain.eu, a GlobalSign SANs SSL Certificate will secure them all in the same Certificate.

Up to 40 Multi-Level Subdomains

Secure all subdomains, even if they are different level subdomains such as www.domain.com, secure.domain.com, products.system.domain.com. All levels are supported.

Up to 40 Public IP Addresses

As long as the company owns the IP address, it can be added into the SANs SSL Certificate.

Up to 40 Localhost Names or Internal IP Addresses

Add all localhost names, such as server1 and Internal IP addresses, such as 192.168.0.1 free of charge.
