Secure Email: S/MIME lifecycle management for enterprise Digital IDs for email security.

Document Security: Adobe PDF and Microsoft document signing and certification.

Developer: Code Signing services, trusted root signing services, and root CA certificate embedding.

Web Hosting Security: SSL reselling services designed around hosting.

Notable GlobalSign Customers

Since its creation, GlobalSign has been providing trust and credibility to all types of customers all around the world.

What makes GlobalSign different?

GlobalSign is a pure-play CA, meaning that everything we do is based on Certificates and Certificate lifecycles, including how they are created, managed, and deployed. We make it as easy as possible to use the technology and, just as importantly, use the technology properly.

GlobalSign established itself as a leading CA, and has always kept up with the constantly evolving environment of digital security. Today GlobalSign continues to provide the most innovative solutions and the best services to its worldwide customers to:

- Improve reliability and security,
- Lead security best practices
- Identify flaws/deficiencies in existing PKI Solutions and create solutions to resolve these.

Doing more than any other CA to improve SSL...

The role of the CA has changed. GlobalSign fully understand this and we have positioned ourselves to be our customers' security partner, not just a vendor of Certificates.

Our mission is to fix how CAs deploy SSL and how users rely on SSL.

GlobalSign's most recent initiatives include:

September	October	November
 <p>Netcraft phishing alert service added. Customers alerted if unknowingly hosting phishing attack pages.</p>	 <p>Certificate revocation status services now distributed via 23 data centers. GlobalSign customers get fastest secure site load speeds.</p>	 <p>Stop the Hacker malware scanning services added to GlobalSign SSL products.</p>
 <p>Certification revocation status services go IPv6 compliant, an industry first for all CAs.</p>	 <p>GlobalSign led collaboration between select CAs and NGINX resulting in OSCP stapling</p>	 <p>sslcheck.globalsign.com SSL Configuration Checker tool launched to help customers identify and remediate SSL implementation vulnerability issues.</p>
