Extended Validation SSL ExtendedSSL Certificates

New Security Standards in SSL help make SSL a Competitive Advantage

The last few years have seen an unprecedented increase in fraudulent web sites and phishing attacks. In 2005 the leading Certification Authorities and Browser vendors came together and formed the CAB Forum - a membership body designed to standardize issuance procedures of future SSL certificates.

In January 2007 the browser vendor forum members will start to release enhanced versions of their browsers – new browsers capable of identifying which SSL certificates are the new "Extended Validation" (EV) certificates. These next generation browsers activate the new green user interface to show web site visitors when they encounter an Extended Validation certificate, resulting in added trust and peace of mind the web site they are dealing with is authentic and legitimate.

The new IE 7 on Vista interface – the first new browser supporting EV SSL. The EV certificate activates the new green interface and the padlock area now alternates between your company name and country and the Issuing Authority - namely the credible and long time established GlobalSign

As a WebTrust compliant CA since 2002 (one of the longest in the world), and a member of the Anti-Phishing Working Group, the GlobalSign infrastructure is ready and in place to support fast turnaround on the new standardized vetting processes necessary to issue an EV certificate.

Contact us today to discuss your specific requirements and how GlobalSign ExtendedSSL Certificates can help you take advantage of the new extended validation SSL technology.

ExtendedSSL The GlobalSign difference

- Activate the Extended Validation support in new browsers such as IE7
- Turns the IE7 address bar Green and clearly shows your Company Name to let your visitors know you have been vetted to the new, standardized high standards
- ExtendedSSL Site Seal
- AutoEV™ technology to maximize the number of "Green Bars" seen by visitors – automatically updates XP SP2 users to support the EV browser interface enhancements
- \$250,000 / €250,000 warranty
- Fast vetting turnaround from a CA that has been vetting SSL Certificates for the last 10 years

SGC Enabled by Default – no extra charges

- Vista & XP SP2 users see the green bar
- All other users receive 128 bit encryption
- Legacy browsers (IE 4.723612.1713 and above) will be stepped up from 40 bit to strong 128 bit

GlobalSign ExtendedSSL Features

EV Legitimacy	Member of CA/B Forum
Enhanced Browser Behavior	<p>Activates Green Bar in IE7</p> 
Legacy Weak Encryption Browser Behavior	<p>SGC enabled Steps weak 40 bit browsers up to strong 128 bit, provides at least 128 bit and up to 256 bit on all popular non-legacy browsers</p>
Server Licenses	<p>3 server licenses One of web server, backup server and third for additional server or load balancer. Usage is customer defined.</p>
Additional Server License Policy	Additional packs of three server licenses available for \$999 \$899
