Unlimited Certificate Plans for Higher Education
Issue as many certificates as needed for one set annual fee

The Best Way to Manage Multiple Certificates

Manage the complete lifecycle of SSL & Client Certificates through GlobalSign's Managed PKI Services, including issuing, reissuing, renewing, revoking, and billing management across numerous departments and institute locations.

- Web-based management platform
- No setup cost or hosting fees
- No IT development/integration
- One platform to manage all certificates

Completely Customizable

GlobalSign's Unlimited Certificate Issuance Plans are extremely flexible and can be tailored to meet the needs of any school. The core of the plan is SSL Certificates, both Organization Validated and Extended Validation, but other types of digital certificates can be added as needed.

SSL Certificates

Through the Managed SSL platform, users can issue both Organization and Extended Validation SSL Certificates. All GlobalSign SSL Certificates are 2048 bit, can be installed on unlimited servers, and come with phishing alert services and optional malware monitoring.

TranscriptSign/PDF Signing

Digitally sign PDF documents such as transcripts. Digital Signatures assure the document is authentic, comes from a verified source, and that the contents have not been tampered with.

iOS Mobile Certificates

Easy to implement and cost-effective, iOS Certificates allow you to control which devices can access your networks using certificate-based authentication.

Client Certificates (multi-purpose)

- S/MIME - Encrypt and digitally sign emails to prove origin of message and prevent tampering and exposure of sensitive content.

- Document Signing - Add the virtaul equivalent of a wet ink signature to Microsoft Office documents to save time and resources over paper-based workflows.

- Network Authentication - Enable certificate-based authentication to control who can access your networks and cloud services.

Scalable for Institutions of All Sizes

GlobalSign offers unique features and functionality that make it easy to manage your certificates no matter how large or distributed your institution.

Unlimited Profiles

Register multiple departments and campuses under one account by creating "profiles". This option allows all activity to be monitored, managed and centralized from one account.

Unlimited Account Users

Define user roles and privileges for users within your institution based on specific profiles, or even specific domains within a profile, giving you full control over which staff members can apply for, approve, renew, and revoke certificates. Organizations can add as many users as necessary without incurring additional fees.

Multiple Application Methods

Organizations can choose from a variety of SSL application methods. Regardless of application method, all orders must be approved by a user with approval rights before the certificate will be issued.

- Direct Orders - Users with purchasing privileges can place orders directly in the MSSL platform.

- XML-based API - This method allows for full integration with the organization's existing purchasings systems.

- Public Ordering Page - Allows anyone within the organization to place an order. The page is highly customizable and can be password protected.

First Class Support

GlobalSign is a pure-play Certificate Authority. Unlike some companies that offer SSL as a secondary product, you can be sure your certificate needs won't be overlooked. Our Dedicated Account Managers are available via phone, web, and email to help with product selection, expedite support questions, and advise on security initiatives.

"The overall pricing, support, and flexibility of the system and the approach to certificate management are fantastic. Bottom line, Global-Sign is a refreshing, forward-thinking approach to SSL Certificate management. I would highly recommend giving them a serious look."
